WARNING

This material contains information affecting the national defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited by law.

INTELLIGENCE RESEARCH AID

The Intelligence Research Aid is a technical publication designed primarily for the use of substantive intelligence officers. The dissemination of this publication outside the Agency varies with the subject matter. Although Research Aids are normally self-initiated for internal use, the Statistical Handbook is widely used in the Government, both inside and outside the Intelligence Community, and is regularly revised and updated to meet the needs of its users. The current issue of the Statistical Handbook was sent to the following recipients outside the Agency:

National Indications Center National Security Agency United States Information Agency Defense Intelligence Agency Department of State Department of Commerce Department of the Interior The Office of Emergency Planning Agency for International Development White House Staff Office of the Secretary of Defense Department of Commerce, Bureau of the Budget Department of the Interior, Bureau of Mines Department of the Treasury Arms Control and Disarmament Agency Joint Chiefs of Staff

FOREWORD

1. Purpose and Scope

The Economic Intelligence Statistical Handbook, 1965, provides reliable statistics on the economies of the Communist countries* and of the countries of the North Atlantic Treaty Organization (NATO).** Every effort has been made to review all pertinent sources, to provide the latest information possible, to make the data consistent and comparable, and to determine that the data are both accurate and meaningful.

The content and format of the Handbook have been revised to make possible more explicit and extensive economic comparisons. New tables have been added, and some tables of marginal interest in previous issues of the Handbook have been excluded. The tabular graphics, in which the data are presented in a combined table and chart, are designed for further possible use as visual aids. To facilitate locating all information on a subject, the table of contents has been organized to combine the listing of both graphic material and tables on the same subject. Footnotes have been used liberally throughout the Handbook to give definitions, exceptions, and methodology. An unclassified table of Selected Conversion Factors is included after the table of contents, and an index is in the back of the Handbook.

The data in the *Handbook* are presented for selected years in the period 1955-64, with plan

2. Rounding of the Totals

In each table the data for the individual countrics have been rounded consistently to permit the maximum use of available information. Because of the limitations in the cumulative data, the totals have been rounded, with few exceptions, to three significant digits. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

Totals are not presented if missing data are believed to represent a significant part of the total. Data are not presented for countries in which little or no production takes place or for which a significant amount of the data are not available. Because of rounding, components may not add to the totals shown.

3. Symbols

In the tables the abbreviation N.A. (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation Negl. (negligible) is used when the magnitude of the data is less than half of the final unit employed for each table.

4. Classification of Data

The overall classification of the *Handbook* is SECRET. The unclassified data, indicated by an asterisk (*), may be official data of the country cited or may be estimates of this Office.

data or estimates of plan data given for the Communist countries for 1965. A summary table is presented for each of the Communist countries, selected NATO countries, India, and Japan. The data for Mongolia, because of their scarcity, are presented in a summary table but are not included in the individual commodity or aggregative tables.

^{*} Including the USSR, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, Communist China, North Korea, North Vietnam, Albania, Cuba, Mongolia, and Yugoslavia.

^{**} Including the US, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the UK, and West Germany. Production data for the Saar before 1960 have been included in the NATO total; for 1960 and after, they have been included in the data for West Germany. Data for Alaska and Hawaii, when available, have been included in the total for the U.S.

5. Sources

The data given for the most recent years frequently are preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data from the country cited, or estimates made by other organizations. The data for the NATO countries are from pub-

lications of the United Nations and the Organization for Economic Cooperation and Development (OECD), from the official publications of other individual countries of the Free World, and from unclassified publications of the US Government.

^{*} An asterisk indicates that the data are unclassified.

a For the individual European NATO countries, the ratios for converting GNP in national currencies at 1963 prices into 1963 US\$ on the basis of US purchasing power equivalents are derived from the 1950 ratios given in Milton Gilbert and Associates, Comparative National Products and Price Levels, OEEC, Paris, 1958, using the geometric mean of European and US weighted ratios. These 1950 ratios were moved to 1963 by applying the following factor: the derived price indexes for each European country for 1950–63 divided by a derived price index for the US for 1950–63. These price indexes were derived for each country by dividing the growth of GNP in current prices by the growth of GNP in constant prices. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1963 prices. The total GNP for the European NATO countries is based on the estimate that the total GNP of the individual countries shown represents 94.6 percent of the total European NATO GNP, which is the relationship given in estimates prepared by the Department of State. The values shown for the Communist countries have been calculated in a manner which makes them reasonably comparable with the values shown for the NATO countries.

b The base year is 1958. Percentages were derived from unrounded data.

Preliminary.

d Including data for the Saar and West Berlin. The data for West Germany for 1960, excluding the Saar and West Berlin, is 1963 US\$ 89.9 billion.

"US market prices. Total Soviet gross national product (GNP) and the various end uses were converted to dollars not by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual or estimated prices paid for various goods and services in the two economies. For GNP as a whole and for each end use component of GNP, these average ratios (ruble-dollar ratios) were estimated by weighting individual price ratios by both US and Soviet expenditure weights. The geometric mean of the US weighted and Soviet weighted ratios was then used for the conversion of Soviet values into dollars.

The magnitudes for the Soviet end use components were calculated to measure quantity of output compared with the US but not the cost in resources. The share of total economic resources devoted to a particular end use or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs. Agriculture, for example, alone uses 44 percent of the civilian labor force, or 49 million people, as a result of the inefficiency of that sector in the USSR.

The adjusted end use component parts of GNP are defined as follows:

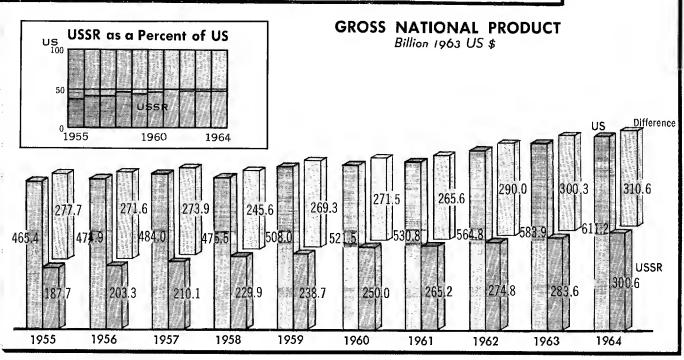

- 1. Consumption equals personal expenditures for goods and services for all purposes except education and noninvestment outlays by government for goods and services for health. (The unadjusted data for the US is \$375.0 billion.)
- 2. Investment is defined (a) for both the US and the USSR as the sum of expenditures for gross private domestic investment, less investment in education facilities; for public construction other than that for education and defense facilities; for equipment purchased by the government except that for education and defense; for defense stockpiling and defense-production expansion; for net exports of goods and services; and for net military grants to foreign countries and (b) for the US, as also including expenditures by state and local government for development of atomic energy. (The unadjusted data for the US is \$82.0 billion.)
- 3. Defense as a component of GNP includes government purchases of goods and services for the military services, federal government expenditures on atomic energy development, and outlays on space research and technology. Defense excludes stockpiling activities, net military grants for foreign military assistance, and government sales. (The unadjusted data for the US is \$57.9 billion.)
- 4. Education includes private and public expenditures on goods and services for education both for current use and for investment purposes. (The unadjusted data for the US is \$23.4 billion.)
- 5. Administration as a component of GNP is the residual left after all current expenditures for national defense, health, and education and all capital expenditures are subtracted from government purchases of goods and services. (There is no equivalent category for the unadjusted data for the US.)
 - b Based on unrounded data.
- ^o The sum of the end use components of Soviet GNP, valued in dollars, does not equal the dollar value of aggregate GNP, because of the use of average ruble-dollar ratios in converting from ruble values to dollar values. Nevertheless, the individual end use components were not adjusted to agree with the total, since the US-USSR comparisons shown are believed to give the best available description of relative size.

^a Indexes for the NATO countries are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing and mining and, in most countries, public utilities. Data for Belgium, France, Italy, Luxembourg, the Netherlands, the UK, and West Germany exclude the manufacture of food, beverages, and tobacco. The indexes for the Communist countries are estimates of this Office—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by this Office. The indexes for the Communist countries include manufacturing, mining, and public utilities.

b The base year is 1958.

[·] Unadjusted for working days.

d Excluding data for the Saar.

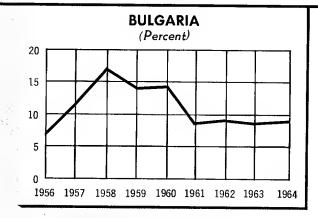

[•] Index of gross values for individual commodities and branches aggregated by 1955 value-added weights. The three sectors covered—materials, machinery, and consumer goods—comprise 44.3 percent, 34.2 percent, and 21.5 percent, respectively, of the valueadded weights for industrial production. This index is as comparable as data will permit with the index of industrial production of the US Federal Reserve Board.

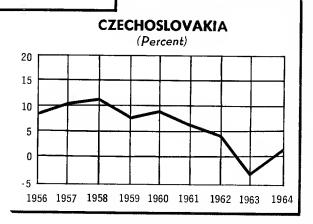

Estimates of this Office computed by applying value-added weights to data for commodity production. The data, particularly for years after 1959, are fragmentary and uncertain. Therefore the index should be regarded as providing only a tentative indication of the general level and trend in production during 1960-64.

^a These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities as in most Western definitions of industry but also certain other activities (varying from country to country).

^b The base year is 1958.

[·] Revised plan for 1965, announced on 9 December 1964.

^d An increase of 15 percent was announced for 1964.

A planned increase of 11 percent was announced for 1965.

DISTRIBUAPPEO VECTIFICATA Release 2000/08/04 CIA-RDP79S01046A001000040001-6

Table 11

Distribution of Gross National Product, by End Use, for the USSR (Adjusted Factor Cost) a Selected years, 1955-63

a Because of the well-known difficulties in using Soviet prices as a measure of resource burden, the shares of GNP in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1955 end use weights have been revised from a market price basis to a factor cost basis by subtracting turnover taxes and adding amortization charges, implicit interest costs, agricultural land rent, and subsidies. These revised weights are then moved over time by indexes of the value of the various end uses in constant market prices.

tures for space	3.42	4.32	4.99	5.66	6.65	6.94	6.83

a These estimates of Soviet defense expenditures include costs of nuclear weapons, costs of space programs, and costs of military research and development, most of which are covered in announced Soviet budget accounts other than defense. Most of the estimates in this table are derived from detailed calculations of the estimated magnitude and cost of individual programs to deploy and operate elements of the Soviet military establishment. These calculations produce numbers that suggest a high degree of accuracy. In fact, however, these numbers are subject to considerable uncertainty and should not be considered as precise measures. The estimates, however, are as accurate and as comprehensive as the data available on 1 May 1965 permitted. If these estimates are to be used for further analysis of a definitive nature, this Office should be contacted to determine whether they have been supplemented or revised in any manner by additional intelligence information.

^b Expressed in 1955 prices.

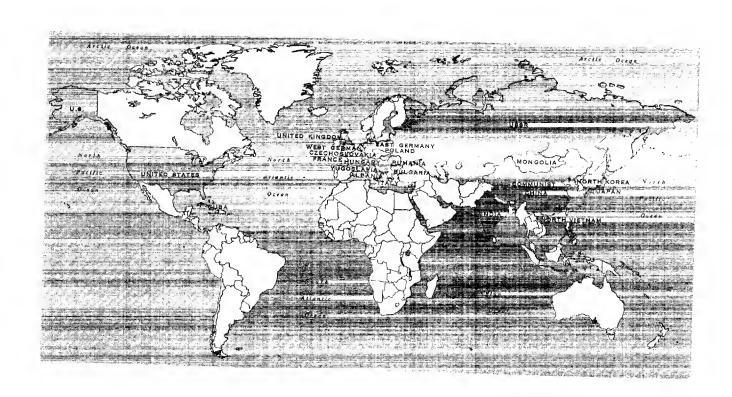

[•] Including estimated expenditures for research, development, test, and evaluation for all military programs, all nuclear energy programs, and all space programs. These estimates are derived from analysis of published Soviet financial data and do not represent detailed calculations of the estimated magnitude and cost of individual programs.

d Including estimated expenditures for reserve training, militarized security forces, and paramilitary training, in addition to command and support for the active military establishment.

^{*} An asterisk indicates that the data are unclassified.

^{*} Excluding the armed forces.

b Annual averages of monthly data. Data in this table are for civilian employment and differ from those presented in Table 140 p 152. Data in Table 140 arc for farm employment and include farm operators doing 1 or more hours of farm work and members of their families working 15 hours or more during the survey week without cash wages. Data in Table 140 are based on a survey of farm payrolls conducted by the US Department of Agriculture. Data for the agricultural labor force are based on a household survey of the entire population conducted by the US Bureau of Census. Data in Table 140 are a more comprehensive count of agricultural employment and are considered to be more comparable to data presented for the USSR, whereas data in this table are considered to be more comparable to data presented for the Communist countries as a whole.

[·] Excluding militarized security forces.

Approved For Release 2000/08/04 : CIA-RDP79S01046A001000040001-6 NONAGRICULTURAL LABOR FORCE

* An asterisk indicates that the data are unclassified.

† Abbreviations for units of measure are as follows: metric tons, mt; kilowatt-hours, kwh; metric tons of coal equivalents, mt/ce; and linear meters, lm.

Estimates of this Office computed by applying value-added weights to data for commodity production.

Excluding the armed forces.

Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.

d Including a negligible amount of brown coal.

e Including 4.16 million metric tons of "native iron."

Including 9.6 million metric tons of pig iron made in "small blast furnaces," of which 5.9 million metric tons were usable for steelmaking.

* Including 13.4 million metric tons made in "small blast furnaces," of which 6.5 million metric tons were usable for steelmaking. b Including tubers on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.

Including sweet and Irish potatoes and other starchy tubers such as tare and cassava.

Fish only.

^{*} An asterisk indicates that the data are unclassified.

Data for exports of total petroleum, crude oil, and petroleum products and for exports to the Communist countries are official Soviet statistics. Data for the Free World are derived as residuals and include exports for which the importing country is not specified. Therefore, the values in this table will differ slightly from the sum of the data from Table 56, p. 69 and Table 58, p. 71. Cuba is included in the Free World in 1958-59 and in the Communist countries in 1960-64.

^{*} An asterisk indicates that the data are unclassified.

^{*} US data are for the period 1 July 1954 to 1 July 1964. Data for Communist countries include extensions of US \$3.7 million made to Afghanistan in January 1954.

^b Including economic and technical assistance and defense support obligations under the Foreign Assistance Act and antecedent legislation, authorized Inter-American Development Bank loans, PL 480 funds earmarked for shipments of surplus agricultural products, authorized long-term Export-Import Bank loans, and US contributions to international organizations.

Data reflect extensions, not actual drawings, and include credits and grants.

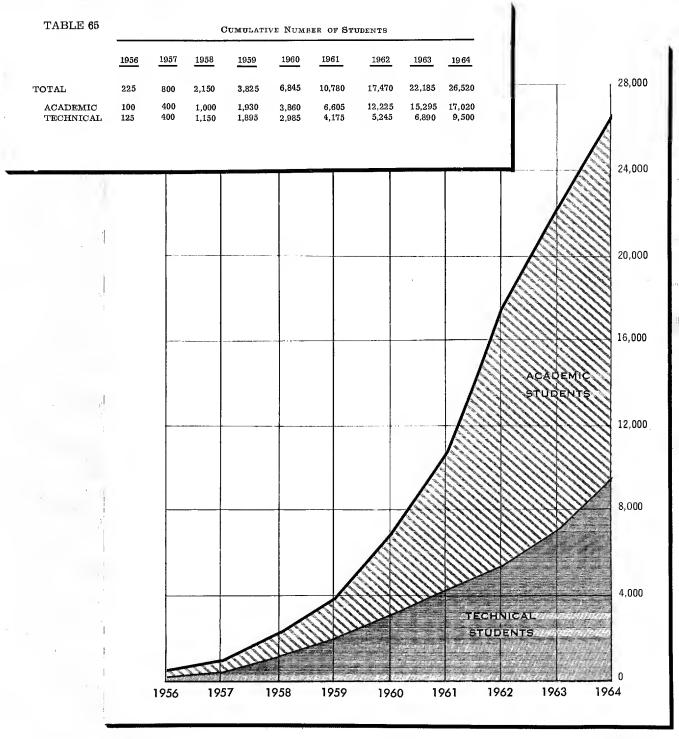

d Including only those credits extended after the formation of the Laos Coalition Government under the Geneva Accord of July 1962.

- * An asterisk indicates that the data are unclassified.
- ^a Official rates unless otherwise indicated. These rates are used for converting trade statistics.
- b Rates used for noncommercial transactions such as diplomatic, tourist and student exponditures, personal remittances, and the like. Some countries have special rates for tourists in addition to the noncommercial rate.
- ° The unofficial rates actually used in East German accounting of foreign trade transactions. Official rates still listed, but not used, are 2.22 DME to US \$1 and 2.47 DME to 1 ruble.
- ^d Generally accepted conversion rates, with the rate of 2.46 being used in trade with the Free World and the rate of 4.0 in trade with the Communist countries. Because official rates have never been announced by Communist China, these conversion rates have been estimated and, therefore, represent only approximations of actual rates.
- An approximate rate. Actual rates vary depending on the transaction involved and the currency being traded. Actual rates also appear to change from time to time.
- 'A bank rate. North Korea has not announced an official relationship between the won and Free World currencies. This rate probably is used for noncommercial transactions.
- ^g A bank rate. North Vietnam has not announced an official relationship between the dong and Free World currencies. This rate probably is used for noncommercial transactions.

st An asterisk indicates that the data are unclassified.

a The total area of the country and, unless otherwise indicated, including bodies of inland water.

b Arable land includes land planted to crops (with double-cropped areas being counted only once); land temporarily fallow; temporary meadows for mowing or pasture; garden land; land under fruit trees, vines, and fruit-bearing shrubs; and rubber plantations.

One hectare equals 2.471 acres. Data are for various years during the period 1957-64.

d Land area only.

[·] Total agricultural area.

Including land belonging to agricultural holdings exceeding 0.405 hectare (1 acre).

Continental sector only.

h Including data for the whole of Kashmir.

i Including data for the Balearic and Canary Islands.

Official Soviet data (22,402,200 square kilometers) include the White Sea (90,000 square kilometers) and the Sea of Azov (40,000 square kilometers), which are excluded by definition from the data shown.

^k Including only plowland and lands formerly cultivated but now idle.

^{*} An asterisk indicates that the data are unclassified.

a The years refer to the crop years—that is, the year ending 30 June of the last year of the 2 years stated.

b Data refer to cleaned rice, jowar, bajra, corn, ragi, small millets, wheat, and barley. Production data relate to harvests mostly completed within the stated calendar years and have been reduced by 12.5 percent to eliminate amounts used for feed seed and waste. Therefore, these data differ from those presented in Table 26, p. 30.

[•] A minus sign indicates amounts reserved for stocks; a plus sign indicates additions to net availability from stocks.

d Including data for Sikkim and Kashmir-Jammu. Midyear population is used because crop production in India occurs at a different period than most other Northern Hemisphere countries.

^{*} An asterisk indicates that the data are unclassified.

a Unless otherwise indicated, data refer to beet sugar produced in the calendar year. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 90 percent of raw sugar by weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

[·] Including cane sugar.

d Including the refining of raw cane imports.

[•] Midpoint of the range of production of sugar from sugar beets planned for 1965 of 9.25 million to 10.0 million metric tons. Before 1960, almost all sugar was produced from sugar beets.

f Cane sugar only.

E Data are for the sugar crop year—that is, the year beginning 1 May of the stated year.

h Including data for Luxembourg.

i Data are for the Azores and Madeira only.

^{*} An asterisk indicates that the data are unclassified.

^a Data refer to all species and scaweed, crustaceans, and mollusks but, unless otherwise indicated, not to aquatic mammals. Data are in terms of live weight in NATO and other Free World countries and in terms of landed weight in the Communist countries.

^b Excluding data for Greece for all years after 1959.

[·] Including aquatic mammals.

d Commercial catch only.

[•] Salt water catch only.

f Fish only.

Excluding data for the Faroe Islands and Greenland.

^b Including the Azores and Madeira.

Excluding mollusks cultivated in parks and "viveros" and aquatic plants.

Data include production expressed in terms of pure (monohydrate) sulfuric acid (100 percent H₂SO₄).

^{*} An asterisk indicates that the data are unclassified.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

[•] Data include appreciable amounts of sulfuric acid produced in government-owned privately operated plants.

d Revised plan for 1965. The original plan was for 11 million metric tons.

e Excluding oleum.

Data are for 1963 and are included in the NATO total for 1964.

Data are for 1962 and are included in the NATO totals for 1963-64.

h Including data related to West Berlin, for which separate data are not available.

^{*} An asterisk indicates that the data are unclassified.

^a For statistical purposes, Soviet production of fertilizers is usually reported as follows: nitrogen fertilizers are computed on the basis of fertilizers containing 20.5 percent nitrogen, potassium fertilizers on the basis of 41.6 percent potassium oxide, and most phosphorus fertilizers on the basis of 18.7 percent phosphorus pentoxide. In addition, total production includes an insignificant quantity of microfertilizers.

^b Data are based on US production given in pure nutrients and recomputed to conform to the Soviet method for expressing production. The years for US data represent "fertilizer years"—that is, the year beginning 1 July of the stated year.

^a Because of differences in definition and product mix, Soviet and US data on plastics are not strictly comparable. For the overall category of plastics, however, there is enough similarity to permit broad comparisons.

b Dry basis, excluding water, solvents, and other liquid diluents. Data have been revised to include some products previously excluded and, therefore, differ somewhat from the previous Handbook.

^e Revised plan for 1965. The original plan was for about 1.8 million metric tons.

^{*} An asterisk indicates that the data are unclassified.

^{*} Data refer to production of primary energy from major sources of supply, including coal, crude oil, natural gas, and hydroelectric power and exclude energy from minor sources such as peat, shale, and fuelwood.

^b Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.

[•] The following coefficients were used to convert the sources of primary energy into standard fuel equivalents: coal (metric tons), 1.0; brown coal and lignite (metric tons), 0.29; crude oil (metric tons), 1.3; crude natural gasoline (metric tons), 1.5; natural gas (1,000 cubic meters), 1.33; and hydroelectricity (1,000 kilowatt-hours), 0.55.

d Estimated plan for 1965.

[•] Including data for Luxembourg.

^{&#}x27; Including data for the Saar.

Approved For Release 2000/08/04 CIA-RDP79S01046A001000040001-6 COAL

^{*} An asterisk indicates that the data are unclassified.

^a Data include, where produced, production of gasoline, kerosine, distillate fuel oil, lubricating oil, residual and other petroleum products, natural gasoline, and liquefied petroleum gases. Data exclude some minor miscellaneous products such as white spirits and bitumen.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

[•] Data for the Communist countries include production of products from indigenous and imported natural crude oil and from synthetic sources. Synthetic production is not included in production for the USSR.

d Excluding relatively small yields of synthetic stocks.

[•] Before 1 April 1962, including data for Algeria.

A much smaller share of total production in the USSR is believed to be used for repressuring.

- Data for the Communist countries are for gross production.
- d Revised plan for 1965. The original plan was for 149.8 billion cubic meters.
- Including methane (dry) gas and wet gas from oilfields.
- f Including data related to West Berlin, for which separate data are not available.
- Including gas used for repressuring and wasted.
- h Data are for 1963.

^{*} An asterisk indicates that the data are unclassified.

^{*} NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data for NATO relate, as far as possible, to natural gas (net production) actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

^b Data for the US are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste) which would include gas returned to reservoirs in order to maintain horizon pressure (about 11 percent of gross production in 1963) would be as follows (billion cubic meters):

^{*} An asterisk indicates that the data are unclassified.

^a Data include total (gross) production at generating centers and therefore include transmission losses and station use. (See footnote b, below.)

^b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.53 percent the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

e Revised plan for 1965.

d Estimated plan for 1965.

[•] Before 1960, excluding data for the Saar.

Data are for the year beginning 1 April of the stated year.

^{*} An asterisk indicates that the data are unclassified.

^a Turbogenerators and hydrogenerators only. Production of diesel generators in most instances is believed to be negligible.

^b Shipments of units 4,000 kilowatts and larger.

[·] Alternating current only.

[&]quot; Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electric power. In addition, turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.

^b Shipments of units 4,000 kilowatts and larger. Data are available only for turbines produced as integral units together with generators. Therefore, data for turbines and generators for the US are assumed to be the same. Some turbines are produced in single units but no data are available on this production.

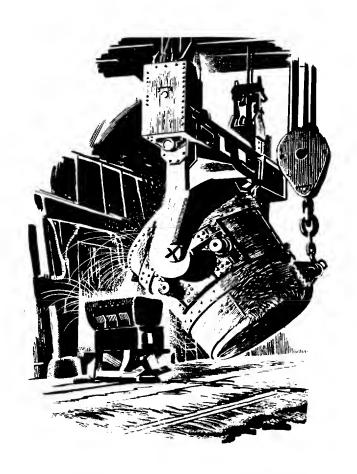

o Including a small number of gas turbines.

d Midpoint of the range of production planned for 1965 of 18.7 million to 20.4 million kilowatts.

^e Steam turbines only.

^t Steam turbines of more than 500 kilowatts only.

^a Unless otherwise indicated, data are for the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." The metal content of the ore in the NATO countries and other Free World countries is as follows: Austria, Luxembourg, and the UK, 27 to 31 percent; Belgium, France, and West Germany, 31 to 34 percent; Greece, Italy, Portugal, Spain, and the US, 47 to 50 percent; Canada and Japan, 55 percent; Sweden and Turkey, 60 to 61 percent; and India, Norway, and Venezuela, 57 to 62 percent. The metal content of iron ore in Denmark is not available.

^o Excluding manganiferous iron ore containing 5 percent or more of manganese.

d The metal content of the ore in selected Communist countries is as follows: USSR, in terms of dressed ore, 55 percent of the ore; Communist China, 20 to 50 percent; North Korea, 40 to 50 percent; Albania, 50 to 55 percent (1 percent nickel); Bulgaria, 38 to 50 percent; Czechoslovakia, 34 percent; East Germany, 25 to 30 percent; Hungary, 24 to 28 percent; Poland, 30 percent; Rumania, 32 to 40 percent; Yugoslavia, 40 percent; and North Vietnam, 55 percent.

[•] Revised plan for 1965.

[!] Plan.

[&]quot; Iron-nickel ore that is mined for its nickel content.

h Shipments.

i Data are for 1963 and are included in the NATO total for 1964.

i Unless otherwise indicated, data exclude titaniferous ores and are for concentrates only.

k Including titaniferous ores.

¹ Excluding certain grades.

^m Merchant ores and concentrates.

ⁿ Including data related to West Berlin, for which separate data are not available.

 $^{^{\}rm o}$ Including iron sand and pyrites.

p Including concentrates.

* An asterisk indicates that the data are unclassified.

• Unless otherwise indicated, data are for production of refined metal.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data exclude Greece for all years except for 1958.

^e Nickel recovered from refined domestic ore and nickel recovered as a byproduct of electrolytic refining of copper. Secondary nickel produced from nonferrous scrap is excluded.

^d Estimated plan for 1965.

^o Nickel content of oxides and sulfides.

Production of nickel for Canada (refined nickel, nickel in oxide produced, and recoverable nickel in matte exported) was as follows (metric tons): for 1958, 126,600; for 1959, 169,200; for 1960, 194,600; for 1961, 211,400; for 1962, 215,000; and for 1963, 199,500. Much of this production is exported for refining in other countries, especially the UK and Norway.

Excluding production for New Caledonia.

^{*} An asterisk indicates that the data are unclassified.

^{*} Service to the subscriber is a two-way service in which a subscriber is provided with a teletype machine connected to the switchboard of a local subscriber telegraph exchange.

b In the US the domestic subscriber telegraph network usually is known as both TWX and TELEX. The data differ from the previous *Handbook* because they now include small independent stations, which previously were excluded.

e Plan.

^d Estimated number for 1965.

^{*} An asterisk indicates that the data are unclassified.

* Including power-driven metalforming machine tools defined as not supported in the hands of an operator when in use and designed to press, forge, emboss, hammer, extrude, blank, spin, shear, and bend metal into shape.

[•] Including power-driven machine tools defined as not supported in the hands of an operator when in use and designed to remove metal in the form of chips, and also including honing, lapping, grinding, electroerosion, and ultrasonic cutting machines.

[•] Including table drilling machines. The exclusion of these machines would result in the following series: for 1960, 5,886 units; for 1961, 6,479 units; for 1962, 6,213 units; for 1963, 5,500 units; and for 1964, 6,470 units.

[•] Production reported by official sources are as follows: for 1958, 50,000 units; for 1959, 70,000 units; for 1960, 90,000 units; and plan for 1962, 60,000 to 65,000 units. Data appear to include many rudimentary types not reported before 1958.

b Excluding manually operated bending and forming machines, spinning lathes, and riveting, can-making, discasting, wire-weaving, wiredrawing, knurling, and marking machines, which normally are included in the definition of metalforming machine tools by the US Department of Commerce.

[•] In 1961 a new plan was drawn up that placed production at 55,000 units in 1965. Since that time, however, the USSR has reverted to the original plan of 36,200 units in 1965.

st An asterisk indicates that the data are unclassified.

Data refer to production of all sizes of motors and, unless otherwise indicated, include alternating and direct current.

^b Including only alternating current motors of 0.25 kilowatt and over.

^a Because of the difficulty of determining valid rates of exchange, data are not presented in terms of a common currency. Official parity rates should be used with caution because they have been established and maintained arbitrarily and do not necessarily reflect the true ratio for construction. For example, the estimated ruble-dollar ratio for construction in the USSR in 1955 prices is about 0.70 new ruble to US \$1.

^b Including the state sector, private housing construction, and construction-installation work performed by collective farms (excluding fishing artels).

^e Expressed in 1955 prices.

^d Value of state construction.

[·] Deutsche Mark East (East German marks).

* An asterisk indicates that the data are unclassified.

a Including the total housing space, which includes living rooms, bedrooms, dining area, and auxiliary space such as bathrooms, kitchens, closets, and inside hallways.

b Data are computed from the number of housing starts during the given years. Strictly speaking, therefore, the data on completions are more accurate for interyear comparisons than for any given year. Housing starts were converted to total floorspace by converting to square meters on the basis of varying sizes of structures.

• Including 67.4 million square meters of urban housing and 20.1 million square meters of rural housing.

d Urban housing only.

• Estimated average yearly construction based on announced performance for several years.

f Official North Korean data for housing construction reported as 6.13 million square meters.

^{*} An asterisk indicates that the data are unclassified.

Including, as nearly as possible, all types of hydraulic cements used in construction.
 Revised plan for 1965. The original plan was for 84.6 million metric tons.

Estimated production for 1965.

d Excluding natural cement.

Data are for 1963 and are included in the NATO total for 1964.

⁴ Before 1960, excluding data for the Saar.

⁸ Including data related to West Berlin, for which separate data are not available.

^{*} An asterisk indicates that the data are unclassified.

- b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."
- Revised plan for 1965. The original plan was for 1,800 billion to 1,850 billion metric ton-kilometers and was reached in 1964.
- d Including performance of railroads owned jointly by Hungary and Austria and performance by narrow-gauge railroads for "limited public usc."
 - Including service traffic.
 - f Full carloads only. The data exclude military traffic.
 - & Government railroads only.
 - h Data are for the year beginning 1 April of the stated year.
 - i Including military and government traffic.
 - i Excluding livestock.
 - k Excluding express parcels.
 - ¹ Data are for the year beginning 1 July of the previous year.
 - m Excluding Northern Ireland. Data include service traffic.
 - " Including data for the Saar.

[&]quot;Unless otherwise indicated, data refer to net metric ton-kilometers and include all goods and livestock carried during the calendar year by trains other than plantation, industrial, forest, mining, funicular and cable railroads but exclude service traffic, mail, and non-revenue government stores. Data include domestic, import, export, and transit freight traffic. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the US specifically include revenue and nonrevenue freight traffic on Class I and II railroads.

- * An asterisk indicates that the data are unclassified.
- Including the performance of ships of less than 1,000 gross register tons (GRT).
- ^b Including Caspian Sea, Danube River, and domestic coastal and intercoastal traffic.
- Including both coastal and international freight traffic.
- d Estimated performance for 1965, based on planned size of the fleet and estimated length of haul.
- Perhaps excluding the performance of some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1964, there were 19 of these ships, totaling 158,514 GRT. It is possible that the performance of one-half of these is included, but no definite information is available.
 - f Coastal traffic only, carried in Chinese and chartered foreign ships.
 - Including both modern coastal and inland water traffic.
 - h Coastal traffic only.

^{*} An asterisk indicates that the data are unclassified.

^a Data include all railroad locomotives of 1,000 horsepower or more. Because of the lack of consistency, totals for the NATO and the Communist countries have been omitted. For data on diesel and electric locomotives, see Table 174, p. 182 and Table 175, p. 183.

b Data include locomotive units, delivered domestically and exported, that are substantially new but also may include a limited amount of used equipment. Data for gas turbine locomotive units, which are included in the total for the US but are not included in Table 174, p. 182, and Table 175, p. 183, are as follows: 1958, 25; 1959, 7; 1960, 12; 1961, 8; 1962, 1; 1963, 0; and 1964, 0.

[·] Locomotives for government railroads only.

^a Data refer to locomotives added to the operating stock by the British Transport Commission and to exports.

[•] Data differ from those presented in the previous Handbook, in which data included large opencast mine locomotives and small mine and industrial locomotives.

Economic data, Rumania 47	Freight cars, railroad, inventory of 189
Economic data, US and USSR 10	Freight cars, railroad, production of 184
Economic data, UK	Freight traffic, highway
Economic data, US	Freight traffic, inland water
Economic data, USSR 41	Freight traffic, ocean
Economic data, West Germany	Freight traffic, railroad 169, 170 Fuels 116–122
Economic data, Yugoslavia	Fuels and power 110–122 Fuels and power 116–124
Economic indicators 2–20	rueis and power 110–124
Electric generators	Gas, natural 122
Electric locomotives, production of 183	Generators, electric 124
Electric motors	Ginned cotton
Electric power	Gold, USSR 80
Electron tubes	Grain 90
Energy, primary	Grain, availability, Communist China 87
Equipment, agricultural	Grain, availability, India
Equipment, chemical, imports, USSR	Grain, availability, USSR 87
Equipment, chemical, production of	Grain combines
Equipment, communications, inventory of 150	Gross fixed investment, USSR
	Gross industrial production indexes, official 11
Equipment, communications, production	<u>-</u>
of	Gross national product
Equipment, metallurgical	Gross national product, absolute and percent-
Equipment, power	age differences, US and USSR 5

Approved For Release 2000/08/04: GtARDP79S01046A001000040001-6

Page	Page
National product, gross 2-6, 12	Railroad freight cars, production of 184
Natural gas	Railroad freight traffic
Natural rubber	Rates of exchange, Communist countries 81
Naval ships, construction of 165	Rates of exchange, NATO countries 82
Nickel, refined	Rayon and acetate fabrics
Nonagricultural labor force	Rayon yarn and synthetic fibers 159
Nonferrous ores and metals	Receivers, radio, in use
North Korea, economic data 50	Receivers, radio, production of
North Vietnam, economic data	Receivers, television, in use 150
0.11.	Receivers, television, production of 149
Oats, barley, and corn 92	Refined benzol
Ocean freight traffic	Refined copper
Oil, crude	Refined nickel
Ore, iron	Refined zinc
Ore, manganese 129 Orc, tungsten 133	Refrigerators
Ores and metals, ferrous and ferroalloying 126–133	Research and development, military, USSR 19
Ores and metals, nonferrous 134–141	Rice
Ores and metals, nomerous 101–141	Rubber and rubber products 113, 114
Passenger automobiles in use 152	Rubber, natural
Passenger automobiles, production of 185	Rubber, synthetic
Passenger-kilometers flown by scheduled air-	Rubber tires
lines	Rumania, economic data
Payments deficit, USSR 79	Scheduled airlines, passenger-kilometers flown. 176
Performance, communications 144–146	Ships, fishing, construction of 180
Performance, transportation 168–177	Ships, maritime cargo, construction of 178
Persons employed on farms	Ships, naval, construction of 165
Persons supplied per farm worker 152	Soda ash 108
Petroleum exports, USSR	Soda, caustic 109
Petroleum pipeline transportation	Space systems expenditures, USSR 19
Petroleum products	Sponge, titanium
Pig iron	State budget, USSR 14
Pipeline transportation, petroleum 177	Stations, TELEX network
Plastics	Steel, crude
Poland, economic data	Students from less developed countries 77
Population	Sugar 97
Potatoes 94	Sulfuric acid
Power, electric	Synthetic ammonia 107
Power equipment	Synthetic fibers and rayon yarn 159
Power, hydroelectric	Synthetic rubber
Primary aluminum	Tanker fleet, inventory of
Primary energy	,
Primary magnesium 140	Tankers, maritime, construction of
Primary tin metal	Technicians, Communist, economic and military
Processed foods and fish catch 95-98	, , , , , ,
Producer goods, production of 160, 161	Telegrams, number sent
	Telephone calls, long-distance
Radio receivers in use	Telephones in use
Radio receivers, production of	Television receivers in use
Railroad freight cars, inventory of 189	Television receivers, production of 149
